

This project will gather people that have the same interest and meet up. We virtualize the real system and experiences for this project. Which consists of creating a meetup event room, rating event, chat system and more. Users are able to redeem their points in exchange for their discount with our partners. Including a function that will analyse data for a role “analyzer” for business and marketing opportunities.

Frontend Installation

```
cd Frontend
npm install
npm run serve
```

Frontend Configuration

- ./src/vue.config.js API to backend port configuration
- ./src/services/port.config.js

Backend Installation

```
cd Backend
npm install
npm start
```

Backend Configuration

- ./server.js
- ./app/config
- ./app/models/db.connection.js

For the queries on this project were all file in ./app/models that end by .model.js

Demo Database

- import "Friendzone_demo.sql" to create a demo data into the application.

Test Account

- Administrator

Username : testadmin
